

Parking Made Easy  
With Omne Technology

[www.omnetechology.com](http://www.omnetechology.com)

# Our Mission

We strive to provide motorists with the utmost security and convenience for making smooth transactions in car parks and other spaces where they need to leave their vehicles for a certain period. We understand how critical it is for parking owners to manage their parking spaces during rush hours as traditional parking payment methods are not capable enough to provide users with an efficient transaction experience. In this fast-paced world, everyone requires super-fast, straightforward, and reliable parking solutions; that's where Omne Technology comes into the scene!

We have developed an automated parking payment system that will provide your visitors with a seamless transaction experience. Being technical enthusiasts, we aim to integrate our parking kiosks into all parking spaces in the United Kingdom and across the world. In addition to saving the precious time of motorists while paying for their parking, our focus is to mitigate the burden of parking owners while collecting parking fees.

**Omne Technology focuses on eliminating the parking misconducts that have been taking place for decades in parking spaces, such as vandalism, overcrowding while obtaining a parking ticket, and so forth. Our mission is to integrate the parking lots with our highly advanced parking kiosks that are straightforward and intuitive to operate. You will not even have to get flustered thinking about vandalism with our products; they are robust and meticulously designed to deter such activities.**

The flexibility of the integrated software allows our parking kiosks to be an independent, all-in-one automated parking payment solution for all kinds of parking lots. We want to enhance the parking payment experience for motorists, and we will leave no stone unturned to do so.

# Our Vision

Whether you are a motorist or car park operator, you will never want to compromise security, convenience, and efficiency when it comes to parking operations. However, managing a parking lot is not a piece of cake as a multitude of transactions take place on a daily basis. No need to get flustered! Keeping all the necessary factors in mind, Omne Technology has come forward with a vision to revolutionise the parking industry in the UK. We want to make all the parking spaces automated and 24/7 functional without the necessity for staffing.

**Being an industry leader in creative design & parking kiosk manufacturing, the holy grail that Omne Technology wants to carry off is to offer cost-effective, efficient, and straightforward customer experience solutions for the parking industry. We believe that with the right technology integration, the efficiency of any parking space can be taken to the next level, and our parking kiosks will do the same thing for you.**

We have two different uniquely designed parking kiosks to meet the requirements of all parking spaces regardless of their sizes. For big parking lots, we have Smart Pay Kiosk, and for small-sized parking spaces, our Mini Smart Pay Kiosk is ideal for motorists to obtain e-parking tickets with ease. Our parking kiosks are designed to handle unlimited daily transactions, so no matter how much traffic your parking lot gets in a day, your transactions will go uninterrupted. Omne Technology has the vision to increase the revenues from parking spaces by making seamless payment options available for motorists in parking lots, and we are bending over backwards to carry off it.

# About Us

Established in the year 2021, Omne Technology is a technology integration company located in the heart of Birmingham. The firm is dedicated to serving the parking industry and motorists by providing elegant & innovative parking solutions. We are a team of enthusiastic connoisseurs, inquisitive about offering straightforward & intuitive touch screen payment terminals integrated with our customised software.

We have introduced our all-in-one payment terminals to the United Kingdom, Europe, and other parts of the world, and at the same time, we are setting the trend for taking parking payments to an online platform. Our team includes highly experienced, well-qualified, and skilled professionals who leave no stone unturned to ensure the quality of products while manufacturing them. We meticulously test all our parking kiosks before delivering them to our customers so that they won't face any issues after installing our products into their parking spaces.

## Accreditations

**Omne Technology is an ISO-certified company, and its products, Smart Pay Kiosk & Mini Smart Pay Kiosk, are RoHS certified and bear CE marking.**

CE stands for Conformance Européenne, a French word that means European Conformity. The CE marking on any product indicates that a product manufacturing enterprise complies with European health, safety, and environmental protection standards. CE does not indicate a product's quality or certification mark, and neither should it be considered a safety mark.

International Organization for Standardization (ISO) certification ensures that a company is credible and meets quality standards. Omne Technology, an ISO-certified company, is obliged to operate its business in an ethical, lawful, and fair manner. It ensures that the products we manufacture are of superior quality & comply with the code of practice to ensure transparency.

Electronic products with Restriction of Certain Hazardous Substances (RoHS) certification demonstrates that our products have been tested before being available to the market. This certification aims to mitigate e-waste & improve the environment and health conditions. Our products comply with all the industry standards and are not detrimental in any way.

We understand how crucial it is to follow a healthy manufacturing cycle in order to ensure the quality of the electronic products and the safety of the environment & people. Therefore, Omne Technology abides by all the rules & regulations throughout the manufacturing process. Our parking kiosks exceed the quality parameters and pose no danger to the environment. They are energy-efficient and are manufactured with attention to detail to do away with even minor errors.

We are obliged to abide by all the industry standards that have been set for us. Nonetheless, we have also set internal measures to ensure excellence in providing our clients with high-end parking kiosks. Our internal team meticulously tests all our products before allowing them to be delivered. Our parking payment machines go through intense damage and quality testing procedures.

# Our Products

## Smart Pay Kiosk

Smart Pay Kiosk is an ANPR integrated parking kiosk specifically designed to provide customers with a frictionless transaction experience. It includes a top-grade touch screen panel along with a straightforward user interface and waterproof IP65-rated enclosure. This parking kiosk also comes with additional features, such as remote monitoring and solar installation. By availing yourself of this product, you can significantly increase your profitability from your parking space as it offers customers a fast, easy, and smooth parking payment experience.

## Features

- |   |  |
|---|--|
|  <b>FRICTIONLESS EXPERIENCE</b> |  <b>ANPR INTEGRATION</b>    |
|  <b>INCREASES PROFITABILITY</b> |  <b>TOUCH SCREEN</b>        |
|  <b>REDUCED VANDALISM</b>       |  <b>REMOTE MONITORING</b>   |

|  <b>FRONT/BACK OFFICE</b>       |  <b>SOLAR INSTALLATION</b>  |

## CUSTOMISED COLORS AVAILABLE

# Mini Smart Pay Kiosk

Mini Smart Pay Kiosk is a compatible parking kiosk that we have designed to carry out transaction processes in indoor parking spaces. It consists of a touch screen panel, ANPR integration, a straightforward user interface, remote monitoring feature, and a waterproof IP65-rated enclosure. It has everything your customers need to make their transactions easy & quick.

## Our Kiosks' Specifications

Our Parking kiosks include a

- 3-Pin Locking Mechanism
- Hidden Locks
- Shock Alarm & Email Notification
- Anti-Vandal Screen

They feature Windows 10 OS and heat sink technology and can be fitted in three ways – Underground, Freestanding, and Floor bolts.

**CUSTOMISED  
COLORS AVAILABLE**

# Technology Integration

We have designed our kiosks by taking care of a multitude of factors into consideration in order to ensure that they shall fulfil everyone's needs and requirements. Our products are already advanced and capable enough to meet the needs of the modern time. However, they leave a scope to integrate various technology that makes them even more futuristic. The following are the technology that can be combined with our parking kiosks:

## 01 ANPR SYSTEM

ANPR stands for automated number plate recognition, it is specifically designed to recognise and capture the registration number plates of vehicles. An ANPR system can automatically identify the cars that either have not got a parking ticket or overrun the allowed parking time. These systems automatically note a vehicle's entry and exit time and identify no permit, whitelisted, non-payment, and overstay cars. Therefore, having an ANPR integrated kiosk will help you review the vehicle information with ease and issue a parking charge notice if necessary.

Our kiosks can be integrated with an ANPR system and help car park owners to manage their lots with ease. The system can monitor thousands of images at once, giving you a smooth & carefree experience. Nonetheless, the software that we have developed is ideal for serving a wide range of sectors, including hospitality, healthcare, transport, education, retail, and leisure.

The ANPR system offers a wide range of advantages, such as efficient management of large complexes or busy parking sites, processing millions of ANPR events, and providing necessary data. ANPR integration allows you to review the technical performance of your parking space and even enables automated processing, such as access control & payment systems.

## 02 SOLAR PANEL

A kiosk integrated with a solar panel is a self-functioning system that does not require an additional energy supply. It does not rely on plugged power and utilises renewable solar energy to process the transactions.

Omne Technology's parking kiosks are compatible to integrate with a solar panel; they are energy efficient and can work flawlessly without an electrical supply.

## 03

### ZatPark

ZatPark is cloud-based parking management software specifically developed to manage the entire parking enforcement lifecycle. It offers remarkable integration to ANPR installation, cashless payment services, and terminals responsible for parking authorisation. In a nutshell, this software is a one-stop solution for managing everything associated with a car park and innovative parking management systems.

Omne Technology's kiosks allow you to integrate them with ZatPark in order to experience a seamless parking management cycle. Our systems work with the ANPR system & ZatPark to help you efficiently manage, process, and set charges for motorists who visit your parking space.

Remember, the best way to get rid of problems is by being able to identify them before they turn into catastrophes. Hence, we provide car park owners with high-end parking payment machines integrated with advanced, user-friendly technology & multiple integration options, including ZatPark.

## 04 BARRIER SYSTEM

With our parking kiosks, you will not have to worry about managing who comes and leaves your parking space. The ANPR system will automatically identify the vehicles that have paid their parking tickets and will open the way for them. This means that Omne Technology's parking kiosks can be integrated with a barrier system in order to ensure no motorist leaves the area without paying their parking fees.

## Other Sectors

Both our products, Smart Pay Kiosk and Mini Smart Pay Kiosk, are specifically designed to serve the parking industry. However, Omne Technology is not limited to them only. We are making our kiosks available to serve other industries as well. We can customise the software of our kiosks depending on your business needs and make it more industry-specific.

So if someone from a different field to parking were to require a kiosk, our doors are open for them.

We can customise industry-specific kiosks for retail businesses, F&B businesses, airports, and universities. So, if you need a kiosk for your customers to process transactions for any of these sectors, Omne Technology will provide you with the best payment machines.

# Software

Kiosk software is designed to provide a wide range of customer service-related functionality via publicly accessed kiosks. These options vary based on the type of company and which services they offer, but in a nutshell, it helps people complete transactions quickly and provides them with information regarding products or services. This way, businesses are able to reach out to their target audience in new innovative ways which have not been used before.

Omne Technology has gone a step ahead of other kiosk manufacturers in terms of software development. The company's kiosks boast impeccable software with frameworks, ASP.Net, Angular, and MySQL for the database. Our software includes a plethora of features that can help parking owners efficaciously manage their car parks. The software provides you with a personalised dashboard along with customised tariff plans and plenty of valuable features, including the ability to export data into an excel sheet, check customer feedback, see analytics, tracking of sites, and more.

With our kiosk software, you get complete accessibility control along with the API integration ability. It can easily help you track all previous pass/fail transactions, vehicle count per day, pending transactions, and more. Our in-house kiosk software also offers you features, such as remote tariff adjustment & real-time business reports. Despite all these remarkable and advanced features, neither will you nor your customers experience any glitches while operating our kiosks; they work flawlessly.

## Why Choose Omne Technology

Omne Technology includes experienced and skilled professionals who have a mindset of conquering the impossible. We never back down and keep our systems & software in the best possible condition no matter how hard things get. Our expert team is always available for the clients to help them cope with the issues (if any) associated with our kiosks.

We keep providing our clients with software updates needed from time to time so that they & their customers can have the best experience of operating a parking kiosk. Omne Technology always looks forward to making businesses more automated, accurate, and efficient by providing them with the latest and most efficient technology integration. So, please feel free to get in touch with us in order to purchase technologically advanced kiosks to provide your customers with a seamless transaction experience.
